📍 India | Open to Remote Opportunities

PROFESSIONAL SUMMARY

Computer Science undergraduate with strong hands-on experience building responsive, production-style web applications using React, Next.js, HTML, CSS, and JavaScript.

Focused on writing clean, maintainable frontend code and building scalable UI systems. Currently expanding into full stack development with Node.js, REST APIs, backend fundamentals, and database concepts.

Passionate about product engineering, AI-driven systems, and building real-world solutions that combine usability, performance, and structured architecture. Comfortable working in startup-style environments with ownership and autonomy.

TECHNICAL SKILLS

Programming Languages

- JavaScript (ES6+)
- HTML5
- CSS3
- Python (Basic – scripting & backend fundamentals)
- C++ (Basic DSA fundamentals)

Frontend Development

- React.js (Component-based architecture)

- Next.js (Routing, layouts, page structuring)
- Tailwind CSS
- Responsive Web Design (Mobile-first approach)
- DOM Manipulation
- Event Handling
- State handling (basic React patterns)
- Layout Systems (Flexbox, Grid)
- UI Debugging & Optimization
- Cross-browser compatibility testing

Backend & API Fundamentals

- Node.js (Basic routing and server understanding)
- REST API structure
- JSON request/response handling
- Basic CRUD concepts
- Understanding of client-server architecture
- FastAPI (learning stage)
- HTTP methods & status codes

Database Familiarity

- MongoDB (Conceptual understanding)
- PostgreSQL (Fundamentals)
- LocalStorage (Client-side persistence)
- Basic database design concepts

Tools & Workflow

- Git (branching basics)
- GitHub (repository management)
- VS Code
- Chrome DevTools
- Vercel Deployment
- Figma (UI reference & layout interpretation)

Currently Learning

- Backend API implementation (Node/FastAPI)
- Database integration patterns
- Docker fundamentals
- TypeScript basics
- System design fundamentals (beginner level)
- Data Structures & Algorithms revision

PROJECT EXPERIENCE

Therapist Website – Production-Level Frontend Implementation

Next.js • Tailwind CSS • Vercel

- Built fully responsive therapist website based on real profile requirements
- Implemented reusable layout structure and UI components
- Designed custom typography system and spacing scale
- Added scroll-based animations and micro-interactions
- Ensured mobile, tablet, and desktop responsiveness
- Deployed production-ready version using Vercel

Live: https://grow-my-therapy-clone-dtj7.vercel.app/

GrindHaus – Fitness Companion Platform (Personal Product)

React • Tailwind CSS • Figma

- Designed and developed scalable fitness platform UI
- Built reusable component architecture for growth
- Implemented modern UI patterns and interaction flows
- Structured frontend for future backend and AI integration
- Focused on usability, consistency, and visual hierarchy
- Applied mobile-first responsive principles

Expense Tracker Web Application

JavaScript • Tailwind CSS • Chart.js

- Developed complete expense tracking application
- Implemented add, edit, delete functionality (CRUD)
- Integrated real-time analytics dashboard using Chart.js
- Implemented persistent storage with LocalStorage
- Added CSV export functionality
- Designed dark mode toggle and filtering system

Live Weather Dashboard

JavaScript • API Integration • Tailwind CSS

- Integrated third-party Weather API
- Implemented asynchronous data fetching
- Built responsive UI with modern glassmorphism design
- Designed 5-day forecast interface
- Managed DOM updates dynamically

Phone Location Tracker (Frontend Simulation UI)

HTML • CSS • JavaScript

- Designed responsive UI for simulated phone tracking system
- Focused on layout structure and device compatibility
- Implemented ethical usage disclaimer and UI clarity

ExpenJar – Android Expense Tracking App

Java • Room Database

- Built Android application with expense categorization
- Implemented local database storage using Room
- Designed simple dashboard with visual spending breakdown
- Improved debugging and state management skills

GitHub: https://github.com/Atharv06pawar/ExpenJar

DEVELOPMENT APPROACH

- Write clean and readable code
- Structure components for scalability
- Debug issues systematically
- Prioritize responsive design
- Learn new tools quickly when required
- Focus on product thinking, not just code execution

EDUCATION

B.Tech – Computer Science & Engineering (Pursuing)
Government College of Engineering, Chandrapur

STRENGTHS

- Strong logical thinking
- Fast adaptation to new technologies
- Self-driven learning mindset
- Comfortable in remote work environments
- Startup-friendly ownership mindset
- Consistent skill improvement

CAREER INTERESTS

- Frontend Engineering
- Full Stack Development
- AI Product Systems
- Health & Fitness Tech
- Scalable Web Applications

AVAILABILITY

Available for full-time remote internships and freelance work.
Flexible schedule and immediate start.
